

SAHIL MANSURI

MERN Stack Developer

 | sahilmansuri1552005@gmail.com
linkedin.com/in/sahilmansuri-dev | github.com/Sahil-Mansuri-15

PROFESSIONAL SUMMARY

MERN Stack Developer and BCA 2026 graduate skilled in building responsive, end-to-end web applications with **React.js**, **Node.js**, **Express.js**, and **MongoDB**. Strong grasp of REST API design, JWT authentication, and modern frontend tooling. Driven to ship clean, scalable code and grow inside fast-paced engineering teams.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, React Router, React Hooks, Context API, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, REST API Design, JWT Authentication, Bcrypt

Database: MongoDB, MongoDB Atlas, Mongoose ODM

APIs & Tools: Stripe, Axios, Git, GitHub, Postman, Vercel, Render, Redis

Concepts: MVC Architecture, Rate Limiting, CORS, Authentication & Authorization

INTERNSHIP EXPERIENCE

MERN Stack Intern | Coding Cloud, Ahmedabad, GJ Dec 2025 – May 2026

- Completed intensive hands-on training in the MERN stack — React component architecture, Express.js routing, Node.js server setup, and MongoDB schema design — under direct industry mentorship.
- Built responsive web interfaces using HTML5, CSS3, and JavaScript (ES6+), applying React state management and component-driven design patterns.
- Practiced REST API consumption with Axios, asynchronous JavaScript (Promises, async/await), and Git-based version control for collaborative workflows.
- Strengthened debugging, code-review, and problem-solving skills through daily tasks and mentor-led project reviews.

PROJECTS

Full-Stack Food Delivery Web Application | [Live Demo](#) | [GitHub](#)

Tech: React.js · Node.js · Express.js · MongoDB

- Architected a complete 3-tier MERN application — customer storefront, Admin Panel & REST API — enabling end-to-end food ordering from browsing to checkout in a single session.
- Implemented JWT-based authentication with bcrypt password hashing and protected routes, securing user sessions and per-user persistent cart stored in MongoDB.
- Integrated Stripe Checkout — generated dynamic line items, created Stripe sessions server-side, and built a verify endpoint confirming payment status before persisting orders.

MERN Notes App — ThinkBoard | [Live Demo](#) | [GitHub](#)

Tech: React.js · Express.js · Node.js · MongoDB Atlas · Tailwind CSS

- Built production-ready REST API with 5 CRUD endpoints on MongoDB Atlas following standard HTTP methods and status codes.
- Architected modular backend (routes → controllers → models) with Mongoose schemas, centralized DB connection, and environment-based configuration via dotenv.
- Implemented Upstash Redis rate limiting to prevent API abuse and ensure consistent server availability in production.

React Movie App with Trending Algorithm | [Live Demo](#) | [GitHub](#)

Tech: React.js · Vite · Tailwind CSS

- Architected modular React SPA with reusable MovieCard components (poster, rating, language, year) and TMDB API integration serving live movie data.
- Implemented search debouncing using useDebounce hook (500 ms) reducing redundant API calls on every keystroke for smoother UX.
- Engineered Netflix-style trending algorithm via Appwrite BaaS — persisted user search queries, incremented per-term counters, and surfaced top-5 most-searched titles.

EDUCATION

Bachelor of Computer Applications (BCA) | Gujarat University, Ahmedabad

2023 – 2026 | *Expected Graduation: June 2026*

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Computer Networks, Web Technologies, Object-Oriented Programming
